Clinical research

Endocrinology and metabolic studies are recognized as part of a universal core objective in understanding the process of mitigation, health maintenance and/or treatment of chronic diseases. WOE is dedicated to mitigating the devastating effects resulting from diabetes, obesity, hypertension, metabolic diseases and lipid disorders. Together, and in conjunction with renowned scientists, academia, and specialists from other research institutes, WOE, P.A. Clinical Research contributes to advances in this field of medical research.

WOE, P.A. investigators have been involved in international conferences, scientific meetings and important forums highlighting recent research projects and presenting scientific publications. Association among professionals in research encourages stimulating discussions while sharing vital information with colleagues. Our experiences and accomplishments have been published in full scientific journals. These investigations exceptionally impact regional and international standards of practice through new discoveries and developments.

With increasing maturity, experience and associations in the industry, we have evolved into industry-sponsored (ISRs) programs. At WOE, P.A. our associations with the Clinical Research Organization (CRO) and pharmaceutical industries, WOE, P.A. has become well recognized because of the commitment demonstrated in collaboration with CRO to a successful clinical trial program.

As we grow and embark on new research programs, we continue to develop and culminate the optimal culture for good clinical practices in research. Compliance with GCP, safety and optimization treatment of our clients are the main goals. We are honored to be of service to the community to offer new products and opportunities to our patients and to provide meaningful information to other scientists, physicians and research investigators.

Our team of qualified staff members maintain a low failure rate for screening patients and for lost to follow-up. Our staff keeps subjects on tract with frequent phone reminders and messages. We have a high enrollment in studies and reach or surpass our expectations. Some of our studies have been capped early due to high enrollment. We are proud to have high enrollment, good retention as well as good quality data.
